

NGUYEN LE VINH

FULLSTACK .NET DEVELOPER

nguyenvinh120330@gmail.com | 0837152541 | Ho Chi Minh City

PROFILE SUMMARY

Fullstack .NET Developer with over 4 years of experience building, maintaining, and integrating enterprise web applications using C#, ASP.NET Core, ASP.NET Framework, Angular, and Vue.js. Experienced in RESTful API development, third-party integration, application migration, and security remediation.

Hands-on experience with CI/CD workflows, Docker, GitHub Actions, and Jenkins, with a strong focus on application security, code quality, and system reliability. Experienced in collaborating with cross-functional teams throughout the software development lifecycle.

EDUCATION

University of Information Technology - VNU HCM

- Master of Computer Science — *12/2024 - Present*
- Bachelor of Information Technology (GPA: 8.73/10) — *09/2019 - 06/2023*

WORK EXPERIENCE

.NET Consultant || Amaris Consulting — *07/2026 - Present*

- Contributed to an enterprise application integration and migration project for a global insurance client, supporting the transition of existing applications and services across enterprise environments.
- Upgraded Docker base images for OpenL WebStudio and WebService, working with Dockerfiles and existing GitHub Actions workflows to build and publish customized images to JFrog Artifactory.
- Developed and integrated OPSWAT file-scanning services using RESTful APIs across multiple .NET applications, supporting secure file upload and download workflows.
- Applied Autofac-based dependency injection to register and manage application services, ensuring seamless integration with existing system architecture.
- Worked with GitHub Actions and Jenkins CI/CD pipelines to support application builds, artifact management, and deployments across different environments.
- Identified and resolved application security vulnerabilities reported by AppScan, including SQL Injection, Cross-Site Scripting (XSS), and exposed secrets in source repositories.

Key Achievements:

- Integrated OPSWAT file-scanning functionality across multiple applications, strengthening file security controls and ensuring consistent validation during file handling.
- Improved application security by remediating vulnerabilities and exposed-secret issues identified during security assessments.

Web Developer || XSUNT Corp — *12/2023 - 04/2026*

- Developed and maintained fullstack features for a CRM-based dashboard system using ASP.NET Core, Vue.js, and RESTful APIs, supporting dynamic data visualization and reporting.
- Enhanced backend services to support automated report generation, enabling dynamic data mapping into predefined templates.
- Built interactive frontend components with dynamic filtering capabilities, allowing users to customize data queries and visualization.

Key Achievements:

- Implemented automated PowerPoint and Excel reporting, supporting multiple slides/sheets with dynamic data mapping to improve reporting efficiency.
- Designed and developed a dynamic filtering system, enhancing dashboard usability and enabling flexible data exploration.

Web Developer || FPT Telecom *05/2022 - 12/2023*

- Developed fullstack applications using ASP.NET Core and Angular for internal enterprise systems.
- Applied NgRx for state management to build scalable and maintainable frontend applications.
- Developed SQL Server queries and stored procedures to support business logic and data processing.

Key Achievements:

- Implemented Quartz.NET scheduling for automated task execution and time-based workflows.
- Optimized SQL queries and stored procedures to improve system performance.

SKILLS

- **Programming Languages:** C#, JavaScript, TypeScript, HTML, CSS (SCSS), Python.
- **Frameworks & Technologies:** ASP.NET Core, ASP.NET Framework/MVC, Angular, Vue.js, ReactJS.
- **Backend Development:** RESTful APIs, Dependency Injection, Autofac, JWT Authentication
- **Database, ORM:** SQL Server, MySQL, ADO.NET, Entity Framework, Stored Procedures, Complex Queries
- **Frontend Development:** Component-based Architecture, NgRx, Responsive UI Development
- **DevOps & Tools:** Docker, GitHub Actions, Jenkins, JFrog/Nexus Artifactory, Git, SVN, Postman
- **Application Security:** SQL Injection, XSS Remediation, Secret Management / Exposed Secret Remediation
- **Caching & Messaging:** Redis (basic), Kafka (logging)
- **Software Practices:** OOP, Debugging & Troubleshooting, Agile/Scrum, Cross-team Collaboration

KEY PROJECTS

Enterprise Application Integration & Migration || Amaris Consulting *07/2026 - Present*

Domain: Insurance || Role: .NET Consultant

Description: An enterprise M&A integration project focused on transitioning existing insurance applications and services into a unified technology environment following a business acquisition.

Achievements:

- Integrated OPSWAT REST APIs across multiple .NET applications to enhance file security and validation.
- Upgraded OpenL Docker base images using GitHub Actions and JFrog Artifactory.
- Remediated application security vulnerabilities identified through AppScan and source code assessments.

Frameworks & Technologies: C#, .NET, RESTful APIs, Autofac, GitHub Actions, Jenkins, JFrog, Nexus.

MAx (v1 + v2) - Data Visualization & Reporting System || XSUNT Corp *12/2023 - 12/2025*

Domain: Business Intelligence (BI) & CRM || Team size: 5 || Role: Web Developer

Description: A CRM-based dashboard system for data visualization, reporting, and export.

Achievements:

- Developed fullstack dashboard features using ASP.NET Core APIs and Vue.js for data visualization.
- Automated PowerPoint and Excel reporting with dynamic data mapping.
- Built a dynamic filtering interface to customize data queries and improve dashboard usability.

Frameworks & Technologies: Vue.js, ASP.NET, PptxGenJS, VXE-Table, ElementUI, HighChart, SQL Server

Reminder – Task & Schedule Management System || FPT Telecom *04/2023 - 09/2023*

Domain: Task & Workflow Management || Team size: 6 || Role: Web Developer

Description: A task management system supporting task tracking, scheduling, and automated reminders.

Achievements:

- Developed ASP.NET Core APIs integrated with Angular for task management workflows.
- Implemented Quartz.NET scheduling for automated task execution and reminders.
- Improved workflow reliability through backend validation and business logic enhancements.

Frameworks & Technologies: .NET Core (C#), Quartz.NET, ADO.NET, NgRx, Angular, SQL Server

CERTIFICATION

- **Applications of AI for Anomaly Detection** || NVIDIA
- **TOIEC LR 690**
- **VSTEP B2 Level**

AWARD

- **2020-2021, 2021-2022: Academic Encouragement Scholarship**
